PERSONAL PROJECTS

GoFood (04/2023 - 04/2023)

- This project is similar to the Foodpanda App. Through this website, users can place orders for fast food items such as various types of burgers, pizzas, and more.

CoffeeBoot (08/2023 - 08/2023)

- I created this project utilizing React, Tailwind CSS, and React Redux. Within this project, users have the ability to provide instructions to a coffee machine, which then processes the instructions to craft the desired coffee. Users simply need to select various options based on their preferences and requirements.

HexaShop (08/2023 - 08/2023)

- I've developed an e-commerce online store that centers around purchasing items for kids, men, and women. The front-end of the store is built using React JS and Tailwind CSS. This platform enables users to browse and buy a variety of products tailored to different genders and age groups.

Personal Portfolio Gennrator (09/2023 - 09/2023)

- I have developed a Personal Portfolio Generator using HTML, CSS, Node.js, and SQL. This application allows users to create an account where they can input their personal information, education details, and work experience. Once the account is created, users can log in and are redirected to a landing page that features various sections, including an "About" section, an "Experience" section, an "Education" section, a "Projects" section, and a "Contact" section.
- Users can add, delete, and update their projects within the application. Additionally, they can edit their profile information. On the administrative side, there is an admin panel where administrators can view a list of users and their respective projects. Admins can add, delete, and update user accounts as needed.

VOLUNTEER EXPERIENCE

Teaching Computer Science (06/2021 - 09/2022)

LANGUAGES

English

Professional Working Proficiency

URDU

Native or Bilingual Proficiency
